Children google for amblyopia (lazy eyes) and binocular vision 3

The Hong Kong Polytechnic University, Dr Ada ASDF
ITSP Tier 3

Abstract:

The objective of this project is to promote children training for visual problems. We plan to develop a stand-alone goggle device with amblyopia and binocular vision training software. The goggles will be equipped with binocular control and optical zoom which cannot be found in any of the electronic goggles in the market.

Training patterns developed in universities for high precision monitors will be adapted to goggles with color display. We will optimize the image transformation algorithm for the selected hardware platform. Standard goggle design will be enhanced with optical zoom and viewing angle adjustment. We will add a sensing camera for automatic control of training patterns and individual adjustments. Wireless communication module will be included for downloading video for entertainment and uploading training data for clinical follow-up.

The developed lightweight, adaptive goggles will allow the children to receive eye training at home for the two common visual problems: amblyopia and binocular vision. This technology could help improve the eyesight of children in Hong Kong. The goggle platform could also be used to provide training for other healthcare needs such as stroke recovery patients and the elderly.

Deliverables:

- 1) Design documents of the goggle in the following aspects. The target weight and power consumption are 400 g and 4W respectively
 - a. Electronic
 - b. Mechanical
 - c. Optical
- 2) Software with efficient algorithm for the following medical treatment
 - a. Amblyopia treatment
 - b. Binocular vision training
- 3) Building of 20 sets of goggle prototypes for vision training with
 - a. Binocular-control system
 - b. Optical-zoom function
- 4) Field trial of goggle prototypes at the Children Hospital with user feedbacks.
